

## Section 1: Introduction to vectors

## Exercise level 2

1. Find the unit vectors in the direction of

$$(i) \quad \mathbf{a} = \begin{pmatrix} 2 \\ 1 \end{pmatrix} \quad (ii) \quad \mathbf{b} = \begin{pmatrix} 4 \\ -3 \end{pmatrix} \quad (iii) \quad \mathbf{c} = \begin{pmatrix} -2 \\ 5 \end{pmatrix}$$

2. In the diagram below, N is the midpoint of OB and M the midpoint of AC.

- (i) Express  $\overline{AB}$  and  $\overline{AC}$  in terms of  $\mathbf{a}$ ,  $\mathbf{b}$  and  $\mathbf{c}$ .
  - (ii) Express  $\overline{AM}$  in terms of  $\mathbf{a}$  and  $\mathbf{c}$ .
  - (iii) Find the position vector of M.
  - (iv) Write  $\overline{NM}$  in terms of  $\mathbf{a}$ ,  $\mathbf{b}$  and  $\mathbf{c}$ .
  - (v) If N and M coincide, write down an equation connecting  $\mathbf{a}$ ,  $\mathbf{b}$  and  $\mathbf{c}$ .
3. The position vectors of A, B and C in the parallelogram ABCD are  $\mathbf{a}$ ,  $\mathbf{b}$ , and  $\mathbf{c}$  respectively. Find the position vector of D.
4. Points A(2, 3), B(5, 7) and C(12, 8) are the vertices of a triangle. The midpoint of AB is L and the midpoint of BC is M.
- (i) Find the position vectors of L and M.
  - (ii) Find  $\overline{AC}$  and  $\overline{LM}$
  - (iii) Find the lengths of AC and LM.
  - (iv) What do you notice about these two lines?
